Illusions of U.S. Foreign Policy

Built on the conviction that political order is engineered through a top-down process, Western foreign policy assumes that the state apparatus creates domestic order, while international institutions and rules build global order. Accordingly, what establishes a more efficient and lasting order is nothing more than the right application of power in its military, economic, or institutional forms.

Energy Politics in the Horn of Africa: A Path Forward for American Foreign Policy

The pursuit of energy security lies at the heart of recent tensions among the Horn of Africa's countries and their neighbors. Amid these tensions, this essay proposes a break from the Biden administration's policy of disengagement and stasis. Rather, renewed American diplomacy can strike a bargain between Egypt, Ethiopia, and Somaliland that would support regional democracy and stability and the free passage of American cargo in the Red Sea.
